IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of

Applicant: JEAN-YVES CHENARD ET AL : Group 153

Serial No.: 254,313 : Examiner:  
V. Hoke

Filed: April 15, 1981 :

For: IMPROVEMENT IN THE STABILIZATION  
OF VINYL HALIDE POLYMERS

DECLARATION OF JEAN-CLAUDE MENDELSON -- 37 CFR 1.131

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

I, JEAN-CLAUDE MENDELSON, do hereby declare that:

1. I am the Jean-Claude Mendelson who is an applicant in the above-identified application.
2. Together with Jean-Yves Chenard, I conceived and reduced to practice the broad idea of the generic invention described in French Patent Application No. 78 24863, filed August 29, 1978, whose priority is claimed in the above-identified application.
3. The generic invention of our conception is contained in the claims of our French Patent Application; an English translation of those claims is attached.
4. Our conception of the invention relates to an improvement in the use of metal compounds to stabilize halogen-containing resins; the improvement involves the addition of an ester of a mercapto alcohol and a carboxylic acid.

5. Our conception of the invention as it relates to tin involved organotin compounds broadly; this is seen from claims 4 and 11.
6. Our conception of the invention as it relates to organotin compounds embraced the field of useful organotin stabilizers; it was never our idea that certain types of organotin compounds, such as the halogen-containing organotin compounds, which were in themselves known to be useful stabilizers, were to be excluded from the scope of our conception.
7. Our conception of the scope of our invention included the obvious and well-known halogen-substituted organotin stabilizers; the work done on our behalf by Michel Foure confirmed that our invention was indeed effective when the organotin compound contains halogen.
8. Jean-Yves Chenard and I were fully aware of the work conducted by Michel Foure in the United States in connection with the combination of halogen-containing organotin compounds and mercaptoesters; this work was done in close consultation with us and represents an embodiment of our invention as described in French Patent Application 78 24863 and described and claimed in the above-identified application.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section

1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

JC Mendel.

Jean-Claude Mendelsohn

## CLAIMS

1. Improvement in the stabilisation to heat, shock and light of resins containing a halogen, by the addition of one or more metal compounds, which consists in incorporating also into the resin an organic additive having a mercaptan function, characterised in that this additive is an ester of an organic acid, in which the mercaptan function is connected to a carbon atom of the alcohol residue of the ester.

2. Improvement according to claim 1, which consists in incorporating the ester additive containing a mercaptan function in the alcohol residue in the resin stabilised with one or more metal compounds, characterised in that the proportion of the additive is from 0.1 to 5% and preferably 0.5 to 2% by weight of the resin.

3. Improvement according to claim 2, characterised in that the additive, which can be formed by several esters, is added to the resin simultaneously with the one or more metal compounds or separately.

4. Improvement according to any of claims 1 to 3, in which the metal compound is a derivative of tin, antimony, zinc, magnesium or other alkaline earth metal or an alkali metal.

5. Improvement according to any of claims 1 to 4, in which the resin includes an epoxide, a phosphite and/or an anti-oxidant.

6. Stabiliser additive for carrying out the improvement according to any of claims 1 to 5, characterised in that it is of the type  $\text{RCOO-R'SH}$ , where R is an alkyl or alkenyl containing at least two carbon atoms and preferably 8 to 12, or an aryl or aralkyl, the R group possibly carrying a second carboxylic group or a second group  $-\text{COOR'SH}$ , while R' is a  $\text{C}_1$  to  $\text{C}_{18}$  alkylene which can carry on or more  $-\text{OH}$ .

7. Additive according to claim 6, characterised in that RCOO- is a fatty acid residue, in particular caprylic, capric, undecanoic, lauric, myristic, palmitic or stearic.
8. Additive according to claim 6, characterised in that the group RCOO- derives from an aliphatic diacid, in particular succinic, adipic or dioleic or an aromatic diacid, particularly phthalic.
9. Additive according to any of claims 6 to 8, characterised in that the group -R'SH is derived from a C<sub>2</sub> to C<sub>6</sub> mercapto alkanol, in particular 1-mercapto-ethanol-2, 1-mercapto-propanol-3, 1-mercapto-2-hydroxy-propanol-3 or 1-mercapto-butanol-4.
10. Additive according to claim 9, characterised in that it comprises calcium stearate and mercapto-ethyl stearate.
11. Additive according to claim 9, characterised in that it comprises an organic tin compound and mercapto-ethyl stearate.
12. Additive according to claim 9, characterised in that it comprises antimony tri-mercaptide and mercapto-ethyl stearate.
13. A plastic mass of polyvinyl chloride or of modified polyvinyl chloride, stabilised by the process according to any of claims 1 to 5.

DECLARATION OF JEAN-YVES CHENARD -- 37 CFR 1.131

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

I, JEAN-YVES CHENARD, do hereby declare that:

1. I am the Jean-Yves Chenard who is an applicant in the above-identified application.
2. Together with Jean-Claude Mendelsohn, I conceived and reduced to practice the broad idea of the generic invention described in French Patent Application No. 78 24863, filed August 29, 1978, whose priority is claimed in the above-identified application.
3. The generic invention of our conception is contained in the claims of our French Patent Application; an English translation of those claims is attached.
4. Our conception of the invention relates to an improvement in the use of metal compounds to stabilize halogen-containing resins; the improvement involves the addition of an ester of a mercapto alcohol and a carboxylic acid.

5. Our conception of the invention as it relates to tin involved organotin compounds broadly; this is seen from claims 4 and 11.
6. Our conception of the invention as it relates to organotin compounds embraced the field of useful organotin stabilizers; it was never our idea that certain types of organotin compounds, such as the halogen-containing organotin compounds, which were in themselves known to be useful stabilizers, were to be excluded from the scope of our conception.
7. Our conception of the scope of our invention included the obvious and well-known halogen-substituted organotin stabilizers; the work done on our behalf by Michel Foure confirmed that our invention was indeed effective when the organotin compound contains halogen.
8. Jean-Claude Mendelsohn and I were fully aware of the work conducted by Michel Foure in the United States in connection with the combination of halogen-containing organotin compounds and mercaptoesters; this work was done in close consultation with us and represents an embodiment of our invention as described in French Patent Application 78 24863 and described and claimed in the above-identified application.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section

1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

OF VINYL HALIDE POLYMERS

DECLARATION OF PHILIP E. RAKITA -- 37 CFR 1.132

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

I, Philip E. Rakita, do hereby declare as follows:

1. I hold a Bachelor of Science degree in Chemistry from the Case Institute of Technology, Cleveland Ohio (1966) and a Ph.D. in Organometallic Chemistry from the Massachusetts Institute of Technology, Cambridge, Massachusetts (1970).
2. I was an Assistant Professor of Chemistry at the University of North Carolina, Chapel Hill, North Carolina for five years, during which time I directed a research group in the area of organometallic chemistry; I am currently employed by M&T Chemicals Inc. and have seven years of industrial experience in the field of organotin compounds for stabilization of PVC; I am an author of twenty-three articles in the field of organometallic chemistry; I am familiar with the literature and state of the art related to the use of organotin compounds to stabilize PVC.

3. I have read French Patent No. 2,434,835 of Chenard et al and it is my opinion that a chemist familiar with the use of organotin compounds as PVC stabilizers would know, first, that the mercaptoesters could be used in conjunction with a large number of organotin PVC stabilizers to improve the performance of the stabilizer, and second, that the well-known halogen-containing organotin stabilizers are among the compounds with which the mercaptoesters can be used.
4. I have read the Declaration of Michel Foure dated December 19, 1983 and it is my opinion that the experimental work described in that Declaration confirms the proposition that the mercaptoesters can be used to improve the stabilizing performance of halogen-containing organotin compounds.
5. It is further my opinion that any chemist familiar with the art of PVC stabilization who was acquainted with Chenard et al French Patent No. 2,434,835 and the experimental work described in the Declaration of Michel Foure would know that the halogen-containing organotin compounds were a useful sub-class falling within the class of organotin compounds with which the mercaptoesters described by Chenard et al could be used.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section

1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

DECLARATION OF WILLIAM A. LARKIN -- 37 CFR 1.132

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

I, William A. Larkin, do hereby declare as follows:

1. I hold a Bachelor of Science degree from Boston College, Newton, Massachusetts.
2. I am employed by M&T Chemicals and have worked in the field of organotin chemistry for PVC stabilization continuously for the past 22 years in a variety of capacities at M&T Chemicals Inc., including Director of Product Development and Technical Services. My experience in organotin stabilizers includes sales, product management, technical service, product development, product applications, marketing and research. I have developed many new and useful organotin stabilizers for PVC. I have been awarded 106 patents worldwide, 76 of which are for the processing of organotin compounds and compositions, organotin stabilizers for PVC, and PVC compositions useful in the manufacture of bottles, film, pipe and house siding.

3. I am familiar with the literature and patents as they relate to organotins and organotin stabilizers.
4. I have read French Patent No. 2,434,835 of Chenard et al and it is my opinion that a chemist familiar with the use of organotin compounds as PVC stabilizers would know, first, that the mercaptoesters could be used in conjunction with a large number of organotin PVC stabilizers to improve the performance of the stabilizer, and second, that the well-known halogen-containing organotin stabilizers are among the compounds with which the mercaptoesters can be used.
5. I have read the Declaration of Michel Foure dated December 19, 1983 and it is my opinion that the experimental work described in that Declaration confirms the proposition that the mercaptoesters can be used to improve the stabilizing performance of halogen-containing organotin compounds.
6. It is further my opinion that any chemist familiar with the art of PVC stabilization who was acquainted with Chenard et al French Patent No. 2,434,835 and the experimental work described in the Declaration of Michel Foure would know that the halogen-containing organotin compounds were a useful sub-class falling within the class of organotin compounds with which the mercaptoesters described by Chenard et al could be used.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and

further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.
